

Installing Git:

- Follow this tutorial: <https://hackernoon.com/install-git-on-mac-a884f0c9d32c>

Installing JDK8 and Setting Environment Variables

- Follow this tutorial: http://www.sajeconsultants.com/how-to-set-java_home-on-mac-os-x/
- If you ran “**which java**” and you find that you don’t have java, install the Mac OS version of java from oracle:
<https://www.oracle.com/technetwork/java/javase/downloads/jdk8-downloads-2133151.html>

Installing Apache Maven and Setting Environment Variables

- Follow step 4 of this tutorial:
<https://www.baeldung.com/install-maven-on-windows-linux-mac>

Recommended to do before workshop:

In your terminal, type the following commands:

```
-> git clone https://github.com/OpenLiberty/tutorial-microprofile.git  
-> cd tutorial-microprofile  
-> mvn package
```

(optional step if you’ve installed docker)

```
docker build -t prime:mym2 (optional)
```
